

BeasyTM
Premium Transfer Boards

Welcome to BeasyTrans Systems!

We are so excited to introduce you to a whole new world of transfer systems and wheelchair accessories. With our premium “no-lift” transfer systems, caregivers can assist instead of lifting, pulling or twisting, which commonly causes serious injuries to caregivers and patients. The unique gliding, rotating seat allows all the weight and friction of the transfer to go on the seat, not the patient’s tender skin and bones. Consistent, safe transfers will eliminate stress and encourage patients to get out and do things they thought they would never do again.

Beasy has been bringing better transfer options to people for over 20 years. Our products are all made in the U.S.A. and sold with pride from our small company in east central Minnesota. Our staff finishes, inspects and packs each product with care. We sell a good portion of our products through our phenomenal dealer network. Each company that sells Beasy products knows their customers will get the highest quality products and service each and every time they order.

Because everyone’s medical needs are different, we offer three models of premium transfer boards. You can look on our website under “Tips and Training” to see a video that will show you exactly how easy our transfer boards work. You will be amazed at how safe transfers can be. There are also times when a gliding transfer board will not work for a patient, so we also carry a new line of standard plastic transfer boards to fit their needs.

We understand that medical conditions can come upon families quickly, and can be stressful. When you call Beasy, you get a real person. Our goal is to find the right products to suit your individual needs, and we will be there when you call, to help in any way we can. We are happy to help without lengthy sales pitches.

Visit our website at www.beasyboards.com. We know you will be impressed!

Sincerely,

Kelly Rogstad,
Director of Operations

Beasy Transfer Systems

To find a product sold by a Beasy Dealer, go to www.beasyboards.com and click on "Dealer Locator." This will allow you to find a dealer near you! If you have any questions, please feel free to contact our Beasy team for product or dealer information. Prices and return policies may vary.

Premium gliding transfer systems allow you to safely transfer from surface to surface with no-lifting. With our no-lift systems, the weight and friction of the transfer goes on the gliding, rotating seat, not on tender skin or bones. Each board is made of the highest quality nylon based plastic materials that can support up to 400 lbs.

#1100
40" Original Beasy Trans
7.5 lbs.

#1200
28" BeasyII
5 lbs.

#1300
32" Beasy Glyder
5 lbs.

Carrying Cases keep your transfer board clean and make them easy to carry. We have standard carrying cases available, or we have an option with adjustable straps to turn your carrying case into a wheelchair bag! Just untuck the straps from the pocket on the back and slip them over the handles on your wheelchair.

Beasy Standard Transfer Systems

In some circumstances, a premium gliding board will not work for a patient. We provide standard transfer boards made of HDPE plastic to fulfill everyone's needs. The weight limit is 500lbs. for our #2100 model and 350 lbs. for our other models. They are easily sanitized with any cleaner safe for plastic. Not shown: #2300 35" Easy Grasp and the #2400 Basic 28".

#2100 Specialty
Bathroom Board
27.5" x 17" x .5"

#2200
Easy Grasp
35" x 8" x .5"

#2600
Beasy Curved
31" x 9.75" x .5"

Transfer boards made of hard material, such as hard wood or plastic, may tend to slide. Using a Beasy No-Slip pad in between surfaces can eliminate sliding, especially on the toilet seat. The No-Slip pad can also keep a patient from sliding before the seat on Beasy premium transfer systems when it is placed between the seat and the patient if they have slippery clothing or wet skin.

#1410
10" Diameter

Beasy Wheelchair Cushions

Wheelchairs can be much more comfortable with a soft cushion. We not only have soft 3" foam cushions, we have fun colors for those who like some color in their life! Dimensions: 18" x 16".25" x 3.5"

Horses

The History of the BeasyTrans System

Beatrice Brantman was a happily married housewife and mother of eleven children. In 1989, she was diagnosed with Multiple Myeloma, a very rare type of bone marrow cancer, which paralyzed her from the waist down. As her husband visited her in the hospital, he noticed that caregivers were having a difficult time moving her. He wondered if there would be a device that could help reduce the amount of lifting, pulling and tugging for patients unable to help transfer themselves. Robert began by making a sketch of a board with a seat that would bear the pressure of the patient and glide them across, saving their sensitive skin and their caregiver's chance for injury. Beatrice sadly passed in 1990, but her husband did not give up his endeavor that would help so many people in the future.

Robert's sketch of this extraordinary board that allowed caregivers to easily slide patients from one end of the board to the other, would soon become a reality. Working with engineers, product designers and friends, blueprints were drawn up, molds assembled and studies were conducted. These studies would lead them to find a plastic polymer material they knew was state-of-the-art and could not be surpassed. Robert Brantman was now an inventor. In 1990, the BeasyTrans System Original 40" premium transfer board was produced. Since that time, two more models would be born – the Beasy II, a smaller version of its predecessor, and the Beasy Glyder, a crescent shaped model that could help transfer around obstacles and facilitate the caregivers natural transfer motions.

Beasy Boards continue to safely provide consistent and dignified transfers and encourage people all over the world to get out and do things they thought they would never do again.
